

Pipe & Fittings

Product Overview

North American Pipe Corporation, a Westlake Chemical company, is a leading polyvinyl chloride (PVC) pipe manufacturer in North America. Founded in 1992, North American Pipe manufactures a broad range of gasketed, solvent welded, and restrained joint pipes, conduits, and fittings for a diverse range of markets including municipal water and sewer, turf and agricultural irrigation, water well, electrical, mining, and plumbing.

Production

North American Pipe Corporation is part of Westlake Chemical. Our vertical integration with Westlake Chemical provides our plants a consistent supply of premium quality PVC resin. This helps ensure quality control throughout the entire manufacturing process. We strictly adhere to industry standards including ASTM, AWWA, CSA, FM, NEMA, NSF, and UL to ensure our customers get exactly what they need.

Health Effects and Exposure Potential

The product, as supplied, does not cause health effects or have exposure potential; however, processing or heating the product may cause health concerns. Processing, such as sawing, sanding, and abrasive applications, may create dusts that have the potential to cause mechanical injury to the eye. If the product is heated to elevated temperatures, or if under fire conditions, thermal degradation of the polymer matrix may occur and result in the release of thermal decomposition products such as methyl methacrylate monomers and hydrogen chloride. Under certain conditions, methyl methacrylate monomer may cause skin, eye, and respiratory tract irritation, central nervous system depression, and skin and respiratory sensitization in susceptible individuals. Under certain conditions, hydrogen chloride may cause skin burns, eye damage and respiratory tract irritation.

Environmental Effects

PVC is a lead-free, inert material and does not readily degrade, so when PVC pipe reaches the end of its service life it will have minimal environment impacts.

Safe Handling, Storage, and Disposal

The product, as supplied, does not cause adverse health effects or have exposure potential; rather, the hazards associated with handling and storing the product are physical in nature. If dusting occurs from handling or processing the product, dust accumulation and potential sources of ignition such as static discharges should be addressed by the user to prevent fire or explosion from suspended, finely divided particles.

When stored, the product should be kept clear of walkways and floors to prevent tripping hazards. The product should be disposed of or recycled in accordance with applicable federal, state/provincial, and local regulations. It should not be disposed into sewers, onto the ground, or into any body of water.

Fire and Explosion Hazards

The product, as supplied, is not a fire or explosion hazard. However, processing the product, such as sawing, sanding, and abrasive applications, may cause dust accumulation. Potential sources of ignition, such as static discharges, may cause fire or explosion from suspended, finely divided particles.

Water, foam or dry chemical are appropriate extinguishing media. Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode due to potentially hazardous thermal decomposition products. In fire conditions, the product may produce irritating or toxic vapors including hydrochloric acid, carbon monoxide, carbon dioxide, methyl methacrylate monomer, aldehydes, ammonia, hydrogen cyanide, hydrocarbons and other potential toxics dependent on specific conditions.

Physical and Chemical Properties

Physical and chemical properties for each product are listed on their individual specification sheets.

Regulatory Information

The product is classified as an article and is exempt from the Safety Data Sheet requirements of the United States' Occupational Safety and Health Administration (OSHA) Hazard Communication Standard and the Canadian Workplace Hazardous Materials Information System (WHMIS).

This product is not a hazardous material or dangerous good for purposes of transportation under the United States Department of Transportation and Transport Canada, respectively.

Notice

Prior to its use, the user is responsible for determining the suitability of the product or products covered by this Product Summary and for complying with all federal, state, provincial, local laws and regulations in connection with its use. Neither Westlake Chemical nor any of its affiliates shall be responsible for any damages of any kind whatsoever resulting from the use of or reliance on this Product Summary or product or products to which it refers.

This Product Summary is intended only to provide a general summary of the potential hazards associated with the product or products described herein. It is not intended to provide detailed information about potential health effects and safe use and handling information and, although Westlake Chemical believes this information is correct, Westlake Chemical makes no warranties as to its completeness or accuracy.

This information is subject to change without notice.
